Dedicated AI Developer with a Bachelor of Technology in Artificial Intelligence and Data Science. Proficient and Experience in developing advanced deep learning models, web applications, and machine learning projects. Skilled in using tools. Seeking to leverage technical skills and project experience to drive innovation AI solutions and enhance user experiences.

SKILLS

TechnicalSkills	Python,SQL,JAVA
SoftSkills	Leadership, Public Speaking, Teamwork, Problem-Solving, Adaptability
Frameworks	Scikit,TensorFlow,Django,Flask,NodeJS,PyTorch
Tools	GIT,MongoDBAtlas,MySQL,SQLite,Eclipse,AndroidStudio,IntelliJ,Pycharm,
Platforms	Linux,Web,Windows,Firebase

PROJECTS

DEVELOP A DL MODEL TO RESTORE VINTAGE ART PIECES USING CONTEXT ENCODERS:

- Engineered a deep learning model that restored over 150+ vintage artworks using pre-trained CNNs and context encoders.
- Boosted feature extraction accuracy by 35%, significantly enhancing image clarity and restoration quality.
- Reduced image noise and reconstruction errors by 28% through advanced transfer learning techniques.
- Contributed to the digital preservation of cultural assets with a solution tested on three public datasets.

DROWSINESS DETECTION SYSTEM USING HAAR FACE ALGORITHM:

- Designed a real-time drowsiness detection system achieving 90%+ accuracy using facial landmark tracking.
- Deployed computer vision alerts that reduced response time by ~40%, enhancing user safety.
- Developed a news summarizer app that condensed content by 60%, improving readability and time efficiency.
- Achieved over 500+ downloads during testing phase on Android with positive feedback.

BOOK RECOMMENDATION SYSTEM USING MACHINE LEARNING

- Built a book recommendation engine trained on a dataset of 100,000+ user ratings using collaborative filtering.
- Delivered personalized suggestions that led to a 25% increase in user engagement during internal testing.
- Decreased irrelevant suggestions by 40%, improving satisfaction scores among test users.
- Integrated feedback loop to auto-improve predictions based on user behavior tracking.

BUILD A DEEP FACE DETECTION MODEL USING DEEP LEARNING

- Created a CNN-based face recognition model with 96.3% accuracy on the LFW (Labeled Faces in the Wild) dataset.
- Enhanced detection speed by 30% compared to baseline models in real-time environments.
- Successfully processed facial data under varying lighting conditions with <5% error rate.
- Applied in a simulated secure authentication system for 100+ test cases with consistent performance.

EDUCATION

Bachelor's of Technology ,Panimalar Institute Of Technology,

Aug,2020-May,2024

Specilized In **Artificial Intelligence And Data Science**

Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Artificial Intelligence, Machine Learning, Networking, Databases

HSC+2,BharathidasanMatricHr.Sec.School

July,2018-Mar,2020

Specilized In Computer Science With Mathematics.

CERTIFICATIONS

Google Courses

Introduction to **Generative AI** Credential ID 9834377, [Certificate](#)

Introduction to **Large Language Models** Credential ID 10474398 , [Certificate](#)

Introduction to **Responsible AI** Credential ID 10481736 , [Certificate](#)

COURSES

Building a **Recommendation System** with **Python Machine Learning & AI**” by Lillian Pierson, P.E. [Credential](#)
